

Teamcenter Restricted Projects

Last Modified: 7/19/2019 4:03 PM EST

In Teamcenter, add the *Project IDs* column to your 'Details' view to see if the project is assigned to objects:

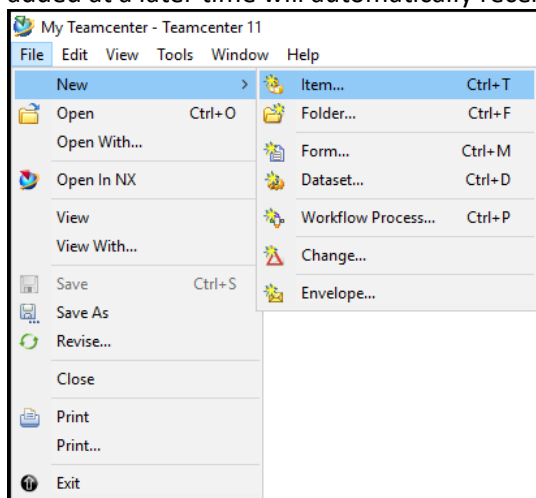

Example:

Type	Object	Project IDs
Item	RESTRICTIVE PROJECT EXAMPLE-Documentation	Restrictive Project
Item Master	RESTRICTIVE PROJECT EXAMPLE	Restrictive Project
Item Revision	RESTRICTIVE PROJECT EXAMPLE/0-Documentation	Restrictive Project
ItemRevision Master	RESTRICTIVE PROJECT EXAMPLE/0	Restrictive Project
PDF	RESTRICTIVE PROJECT EXAMPLE/0	Restrictive Project

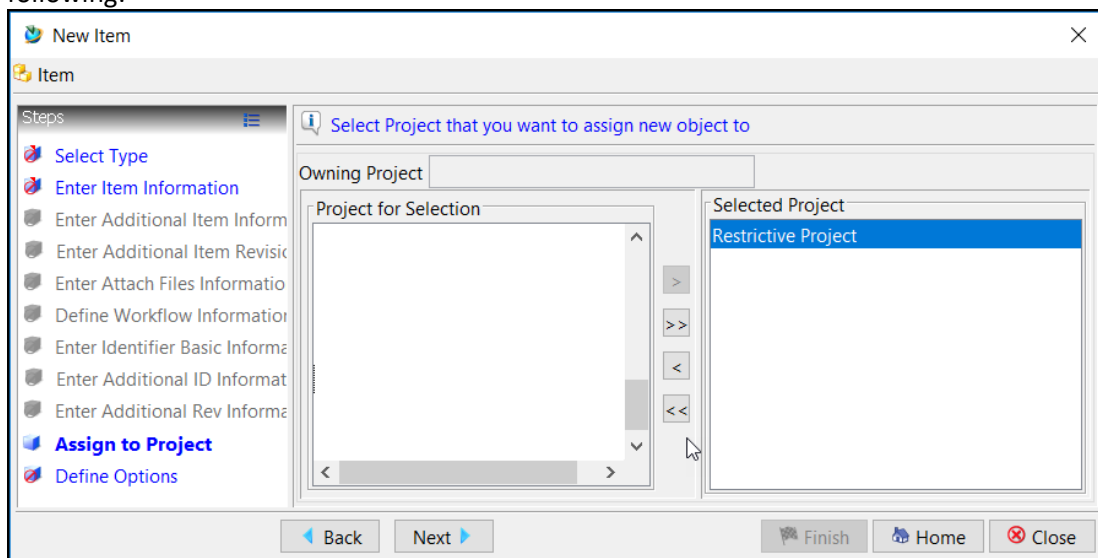

Assigning the Restrictive Teamcenter Project to data

1. Creating a new Item within Teamcenter:

File->New->Item has an option to add the project upon Item creation. All objects or revisions added at a later time will automatically receive the project protection using this method:

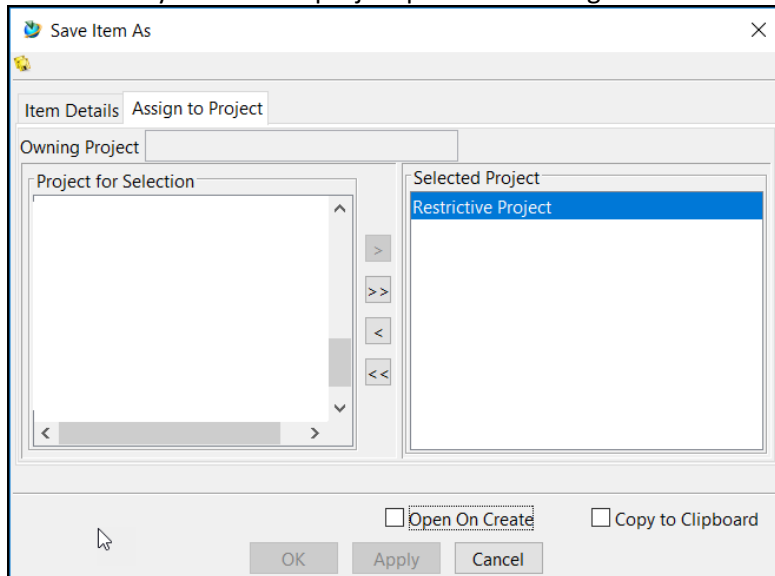

After entering Item ID and other required information, choose *Next* until you reach the following:

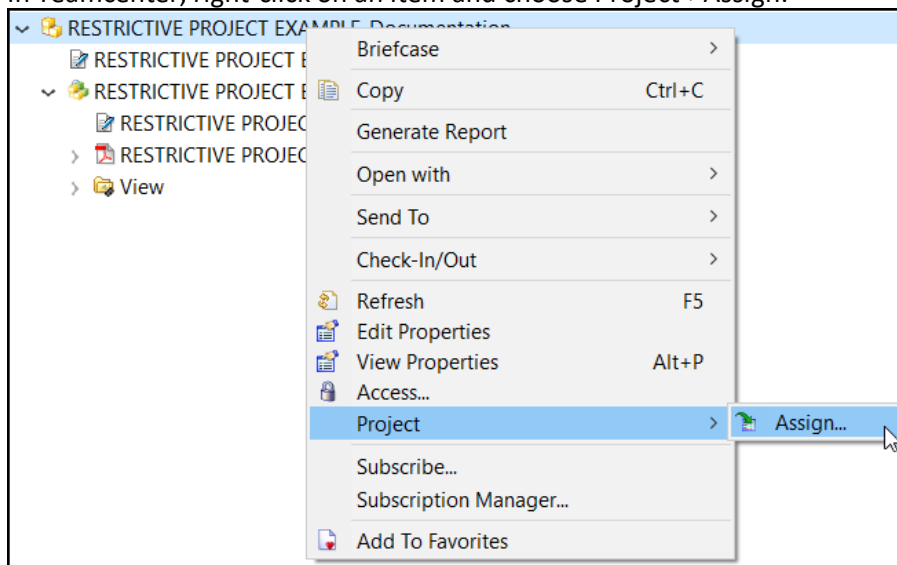

2. Creating an Item in Teamcenter based on already existing Teamcenter data:

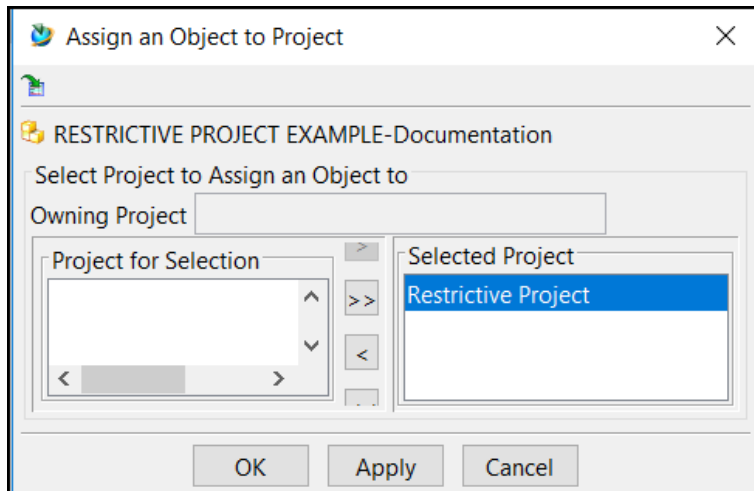

In Teamcenter, not NX, select an **Item** and choose File->Save As. File->Save As has an option to add the project upon Item creation. All objects or revisions added at a later time will automatically receive the project protection using this method:

3. If an Item already exists in Teamcenter and has not been protected properly:

In Teamcenter, right-click on an Item and choose Project->Assign:

Notes about Restrictive Teamcenter Project security configuration:

- When protected by the Project, only Project Team members can view the data
- Only designated Project Team members can assign data to the Project or remove data from the Project
- Only meta-data (data about the data) will post to the PDM Library
