Configuration Information *(Header-properties in non-ACE pages)*

3D is a "Sticky tab" ("Global tab") *Does not change content on selection*

Tab Container / XRT Pages. Static (page context)

Navigation Bar

Primary Work Area

Secondary Work Area, showing Summary

Right-Hand Wall *Works on selection, or on the location when there is no selection*
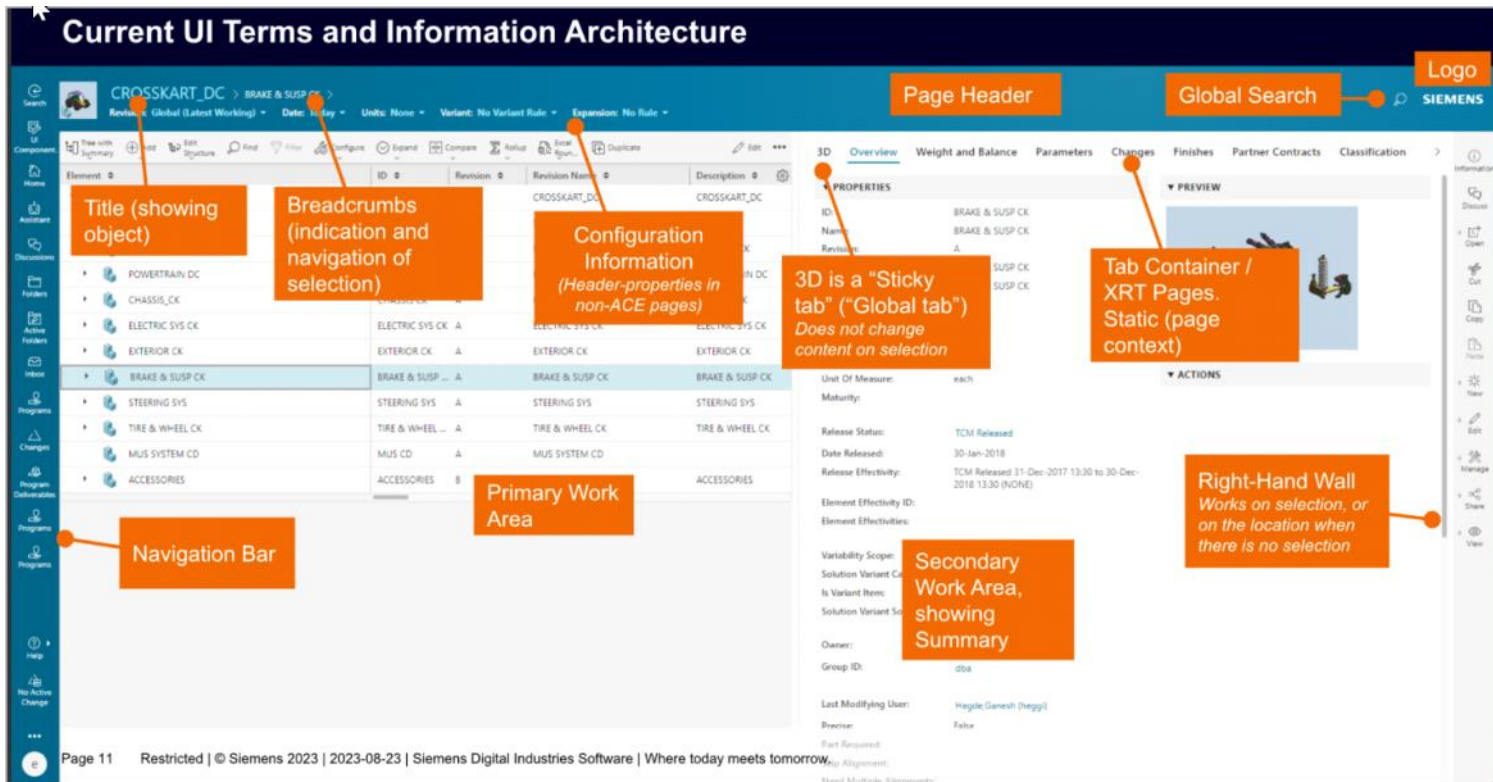

Forward Looking Disclaimer

The information given in this document represents descriptions of **future planned development and/or features** which may not always specifically reflect those described, or which may undergo modification in the course of further development of the products.

Most of what is described is coming in the end of the year release called **Teamcenter 2312**. The content is being previewed to showcase the **current thinking to improve the information architecture** in the Teamcenter web client.

Collection Pages

New Information Architecture for search-based pages that return a set of objects

Search, Inbox, Changes, and more than 100 more

Updated Collection Pages

App Icon
*Unique identify within common frame to identify you are in Teamcenter*

Collection Page Header
Clean header with a clear hierarchy for the page with the tabs under the collection name
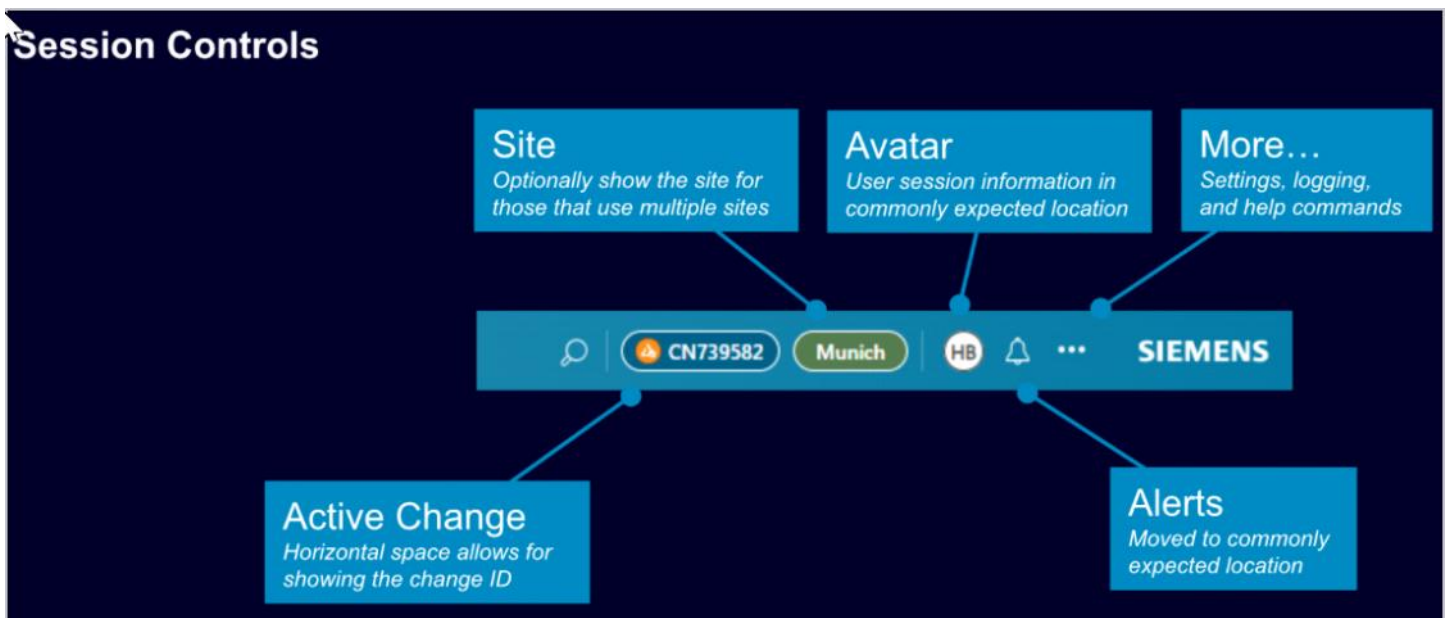

Session Controls
Commands and status indicators for the session moved to top right

Application Frame
Contains navigation and session wide state and controls

Navigation Only
Now reserved for app navigation only

Selection Breadcrumb
Selection breadcrumbs separated from header. Positioned to create relation with commands.

Page Level Toolbar
Commands relevant to selection anywhere in the page move from right to the top. Less frequently used commands moved to overflow menu. New command style and placement specific label visibility.

Page Level Toolbar
Contains former right-hand wall commands and new layout chooser

Layout Chooser
Moves choosing layout choice to the page level toolbar. Supports new layouts.

Hopefully we won't need this anymore:

Session Controls

Site
Optionally show the site for those that use multiple sites

Session Controls

Site
Optionally show the site for those that use multiple sites

Avatar
User session information in commonly expected location

More…
Settings, logging, and help commands

Active Change
Horizontal space allows for showing the change ID

Alerts
Moved to commonly expected location

Section Styling

▼ Part Properties

ID:	HDD-0527

▼ Preview

▼ Aligned Designs

Typography Section Title
Bold and lower-case section labels

White Fill
White fill with a light gray background

Aligning with NX
Same border, expand/collapse control, and section label styling

Section Border
Thin gray border around the section

Updated Show Object Pages

App Icon
Unique identify within common frame to identify you are in Teamcenter

Open Object Header
Unique tab styling to differentiate apps from open objects and visually separate object-level and system-level elements.

Session Controls
Commands and status indicators for the session moved to top right

Selection Breadcrumb
Selection breadcrumbs separated from header. Positioned to create relation with commands.

View Switcher
Allow switching view from each slot. Global views ("sticky tabs") moved here.

Navigation Only
Now reserved for app navigation only

Details Header
Indicates scope and exposes key properties and key command, e.g., Edit and Save/Cancel

Section Styling
Align styling across web and desktop apps and provide a better visual representation of the content of the section

Page Level Toolbar
Commands relevant to selection anywhere in the page move from right to the top. Less frequently used commands moved to overflow menu. New command style and placement specific label visibility.

Layout Chooser
Moves choosing layout choice to the page level toolbar. Supports new layouts.
